

India Inflation Analysis (April – June 2026)

Overview

Inflation measures how quickly the prices of goods and services increase over time. In India, inflation is primarily tracked using the Consumer Price Index (CPI) and monitored by the Reserve Bank of India (RBI). RBI Inflation Target: 4%.

Monthly Inflation Data

- April 2026: CPI Inflation 3.48% — Below RBI Target
- May 2026: CPI Inflation 3.93% — Close to RBI Target
- June 2026: Data Pending — Not Released Yet

Inflation Trend

April 2026: Inflation remained comfortably below the RBI target.

May 2026: Inflation increased by 0.45 percentage points, mainly due to higher food prices.

June 2026: Official CPI data is yet to be released.

Key Insights

- Inflation increased from 3.48% in April to 3.93% in May.
- Percentage increase: 12.93% compared to April.
- Food inflation remained a major contributor.
- RBI continues to monitor inflation closely.

Conclusion

India's inflation during April–May 2026 remained within a healthy range and below the RBI target. Although inflation rose in May, overall economic conditions remained stable.
